STRUCTURE

M a c h i n i n g

In-Place Machining Company has specially designed portable machines and expert machinists for machining of existing and new bridges, and other structural steel assemblies. The machining includes radius machining on bascule bridges, and boring, milling, drilling, grinding, and journal refurbishing on other structures. IPM is very experienced with bascule, box girder, welded plate girder, tubular truss, and all other types of bridges. The work can be performed in your shop during fabrication, or at the site during or after erection. We offer prompt, efficient and economical worldwide service 24/7/365. Whether you have a small repair or a massive modernization project, IPM will work with you to minimize down-time and stretch your budget dollars. Next time a problem threatens your project, In-Place Machining Company can help get you back on track, In-Place... Any Place in the World.

- *Bearing Journals & Trunnions*
