Serving The **FORGING & FORMING** Industries

Forge shop hammers, stamping and forming presses, press brakes, shears and other equipment develop problems from normal usage or accident. Practically all of these problems can be rectified on-site by In-Place Machining Company. The repair may include welding, on-site machining, Metalstitch® Cold Cast Iron Repair, scraping, alignment, or combinations of these processes. Skilled machinists and welders are available for emergency work and for scheduled outages. They travel throughout the United States, Canada, and the world and utilize specially designed portable equipment and machines to accomplish work expertly, quickly, and economically. Forge shops have learned to depend on the expertise and quality work we provide for solutions to problems with forge shop machinery. The work is performed on-site or in our very complete shop.
