Full Service **MEASUREMENT & ALIGNMENT** Services

In-Place Machining Company provides a wide range of laser and optical alignment, measurement, and inspection services that complement our on-site machining. With conceivably the largest and most diverse assortment of laser/optical alignment and measurement instrumentation, IPM is able to guarantee precise location, orientation and size measurements before, during, and after our machining operations. All our laser alignment & measurement equipment and instrumentation is calibrated on a regular basis with our in-house calibration equipment including a set of NIST traceable standards. Precision measurement is an important part of our on-site field machining services. We have a complete inventory of measurement tools including:

- **Laser Tracker**
- **Laser Coupling Alignment Systems**
- **Alignment Telescopes**
- **Jig Transits**
- **Bore Scopes**
- **Theodolites**
- **Electronic Height Micrometers**
- **Straight-beam Lasers**
- **Rotating-beam Lasers**
- **Ultrasonic UT Inspection Equipment**
- **Magnetic Particle and Dye Penetrant Inspection**
- **Precision English and Metric ID and OD Micrometers**

Portable Coordinate Measuring Machine (CMM)

Optical Inspection & Alignment of Engine Block

Measure Complex Geometry with Multiple Optical Devices

Wicket Gate Line Bore Inspection with Optics & Electronic Level

Laser Straightness Check of Roll Grinder Ways

Laser Alignment of Motor Couplings & Gearbox

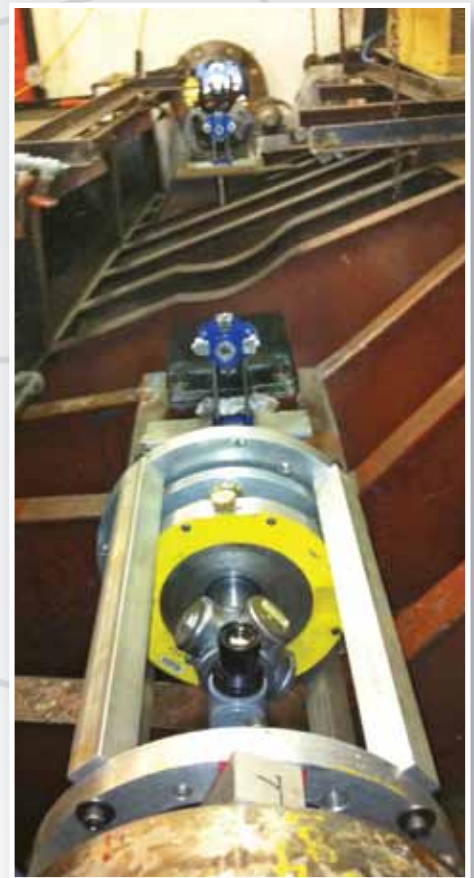

Inspect Alignment Between Propeller Strut Bores on Marine Vessel

In-Shop Testing of Laser Tracker

Laser Alignment of Gantry Mill Ways

Optical Inspection of Gantry Mill Ways

Optically Align Shaft Couplings
