

IPM Expands Field Machining Services with New Pacific Northwest Division

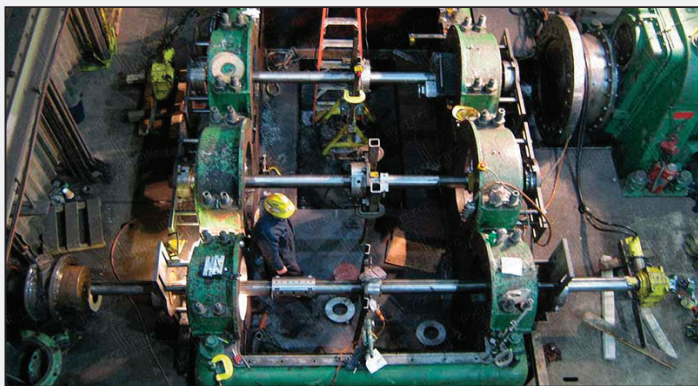

IPM Field Machining Services Extended with Our New Vancouver, Washington Shop

In-Place Machining Company's [field machining services](#), [on-site measurement & alignment](#), and [certified on-site welding](#) are now supported by our new **Vancouver, Washington location** to better support our customers. An industry pioneer, IPM is a world recognized leader in precision on-site field machining, milling, boring, drilling, and refurbishment work.

IPM's Pacific Northwest Division Expands Field Machining

Expanding Field Machining at our Pacific Northwest Division— To add a greater physical presence on the West Coast, In-Place Machining Company is happy to announce that we have opened a shop in the Vancouver, WA area. IPM Pacific Northwest is proud to introduce Joe Sassmen as General Manager and Bart Rierson as Regional Sales Manager,

On-Site Line Boring Field Machining

who together have over 50 years of [field machining](#) experience. With the combination of local experts and the technician and machine tool resources provided by IPM, we are uniquely positioned to provide timely, high value, and professional services to your project.

High Precision Field Machining from Start to Finish — IPM is a world leader in precision field machining and measurement services. Our equipment can perform operations matching the precision and geometric tolerancing one is accustomed to in shop machine environments. Our versatile, modular equipment can be configured to perform virtually all traditional machining and finishing operations such as turning, milling, drilling, boring, grinding, honing, and lapping.

Our field machining services are complemented by our measurement services, which provide ultra-precise on-site measurement, inspection, and alignment services to our customers at their facilities nationwide and around the world. Our on-site measurement technology integrates ultra-precise portable laser and laser tracker systems, optical, mechanical, and electronic measuring instrumentation with sophisticated computer software to provide coordinate measuring machine accuracy without the size and environmental constraints of conventional stationary CMM's.

IPM's Extensive Field Machining Services Include—

- Field Machining - Including Milling, Turning, Drilling, Boring, Tapping, and Reaming
- Diamond Wire Cutting
- Foundation Milling
- Bearing Journal Repair (with or without Shaft Rotation)
- Shaft Keyway Refurbishment
- Flange Facing
- Stud Removal
- Specialty Welding, Including R-Stamp Certified Repairs
- High Accuracy On-Site Laser & Optical Alignment and Measurement
- Metalstitch® Cold Cast Iron Repair

Field Machining: Portable Lathe Blade Root Modification on LP Rotors
